

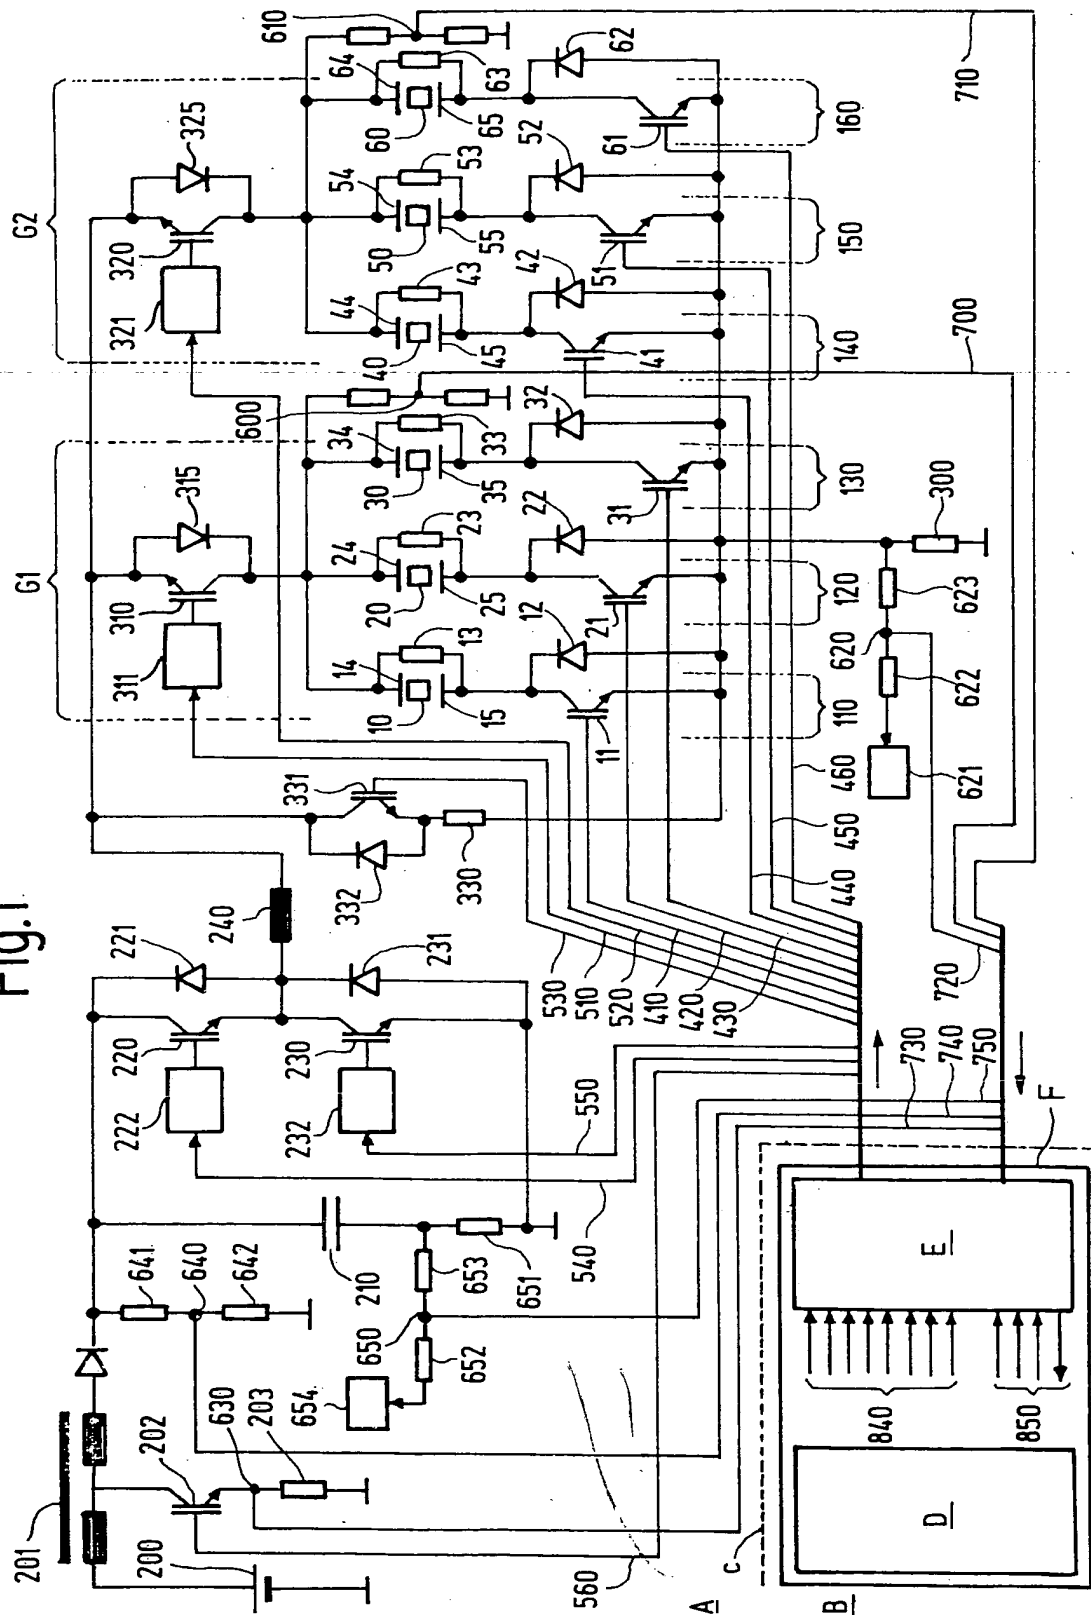

Fig. 1

Fig.3

Charging and discharging edge of an injection

Fig.4

Combination of overlapping edges of two injections

Fig.5

Examples of assignment of priorities

Edge:	B1	B2	E1	E2	
	1	2	3	4	different priority only
	1	2	1	2	partially different priority
	1	1	2	2	
	3	3	3	3	same priority

(with 4 priority steps, 4^4 = 256 different assignments are conceivable)

Fig.6

Measures for singular primary collision

<u>High-priority overlapping edge</u>	<u>Low-priority overlapping edge</u>
advance	advance
advance	leave unchanged
advance	retard
retard	advance
retard	leave unchanged
retard	retard
leave unchanged	advance
leave unchanged	retard

⊗ combined with

<u>Associated complementary edge of the high-priority overlapping edge</u>	<u>Associated complementary edge of the low-priority overlapping edge</u>
advance	advance
advance	retard
advance	leave unchanged
retard	advance
retard	retard
retard	leave unchanged
leave unchanged	advance
leave unchanged	retard
leave unchanged	leave unchanged
